

Modern Project and Work Management — Built Inside Microsoft 365

Unify people, apps, and data with a platform-first approach anchored by Teams4PM.

Challenges

Today, collaboration is happening in real time with new and evolving tools, but the work and project management that govern it stand apart from the actual work that is taking place. Formal project and work management roles address critical issues, but their toolset provides limited collaboration capabilities. Nontraditional project and work management roles are managing significant work and making decisions without visibility through the organization.

Build a Modern Work Management Platform on Microsoft 365

Project and Work Management Where Work Happens

Bring structure and governance to project and work management directly inside Microsoft Teams and Microsoft 365.

Trusted, Connected Work Management Data

Connect work, project, and portfolio data across Microsoft tools to create a secure, tenant-native foundation for visibility and AI.

Real Visibility for Better Decisions

Give PMOs and leaders a clear, real-time view of work across the organization so they can prioritize, manage risk, and drive better outcomes.

When This Approach Matters

- Your organization runs heavily on Microsoft 365 but project management lives in disconnected tools
- Teams manage work across multiple systems and leadership lacks a clear portfolio view
- Your PMO needs governance and structure without slowing down teams
- Project and work data exists, but reporting and decision-making still rely on manual effort
- You want to prepare your environment for AI and Copilot by connecting work management data

80%

of project management tasks will be run by AI in 2030*

*Gartner, [How Will AI Transform Project Management, February 2023](#).

Turn Microsoft 365 into a Work Management Platform

Organizations already rely on Microsoft 365 to collaborate, communicate, and get work done. By extending that platform to include structured project and work management, teams gain the visibility, governance, and connected data needed to execute more effectively.

Connect work, projects, and portfolio insight across Microsoft 365.

Bring project and work management into the flow of work across the Microsoft platform your people rely on every day. By unifying people, apps, and data inside Microsoft Teams, organizations gain clearer visibility into work, stronger alignment across teams, and the insight needed to make faster, more confident decisions. The result is a more connected way to manage work—helping leaders focus on the right priorities, teams collaborate more effectively, and organizations execute with greater confidence.

Standardize Project and Work Management Across the Organization

Prepare Your Work Data for AI and Copilot

Transform Teams into a unified PM hub

Align Teams Around Strategic Priorities

Connect Work, Projects, and Portfolio Data

Gain Real-Time Visibility Across Work and Projects
