TEAMS4PM powered by Innovative-e

Harness the power of AI to advance project management

Centralize project collaboration in Teams to gain real visibility and power AI insight.

CHALLENGES

Disconnected tools and fragmented project data create manual work, constant status chasing, and limited visibility, putting projects at risk.

Organizations need accurate, holistic views of project work across teams and departments, but that becomes difficult when project information is scattered across disconnected tools. By centralizing project collaboration and data within the Microsoft platform, organizations can establish a trusted foundation for visibility, reporting, and AI-powered insight.

INTRODUCING TEAMS4PM

### Leverage AI in Microsoft Teams for Work and Project Management

Chances are your organization already uses Microsoft Teams to collaborate. In fact, 9 out of 10 Fortune 100 companies and more than 300 million people worldwide rely on Teams every day.

Teams4PM extends Microsoft Teams into a structured environment for managing project and work collaboration. It brings consistency, visibility, and organization to project work without forcing teams to leave the platform where work already happens.

By capturing project collaboration directly inside Teams, Teams4PM creates the trusted data foundation organizations need for reporting, portfolio visibility, and AI-powered insight.

BENEFITS

How Teams4PM brings structure, visibility, and AI-ready data to Microsoft Teams

Unified collaboration, work, and project management

- Transform Teams into a unified platform for project management
- Reduce the distance between work and project management

Reliable, holistic, and trustworthy data

- Leverage the Microsoft cloud your org already trusts
- Seamlessly and centrally track projects across the entire portfolio

Make smarter business decisions faster and with more confidence

- Increase visibility across projects in real time
- Start including all projects in reporting, regardless of complexity
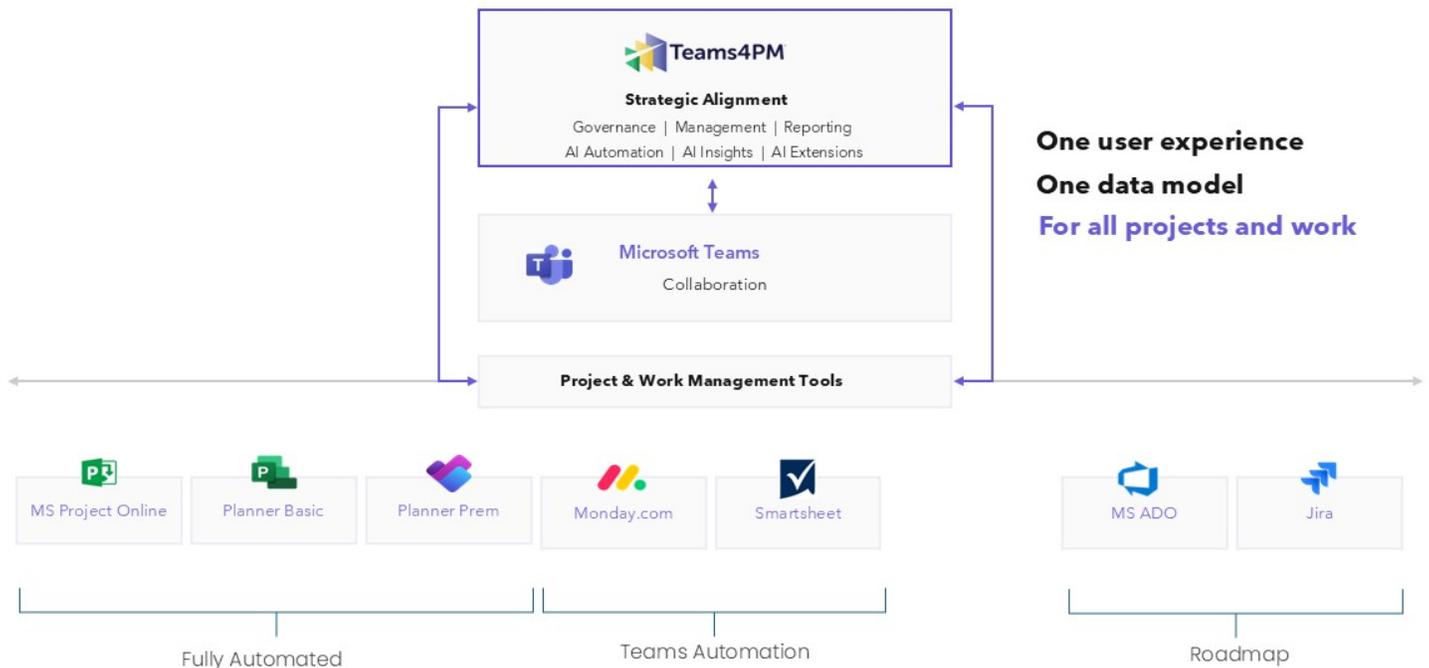

Empower your organization with the power of AI

- Put your project and work data to work with AI
- Create dashboards to empower business leadership with context

Teams4PM connects Microsoft Teams and existing work management tools to create one experience and one data model for all work.

The world's first project and work optimization platform

Teams4PM is built on Microsoft Teams, the collaboration platform of choice for over a million companies

How Southern New Hampshire University improved project visibility

Challenges and results

Like many organizations, SNHU struggled with complex tools, inconsistent project management practices, and low adoption of traditional PPM systems. Because the university already relied on Microsoft Teams for collaboration, Teams4PM was a natural fit.

After implementing Teams4PM, SNHU achieved broad cross-departmental adoption across the university. Project status and resource assignments are now instantly accessible, and the organization now benefits from centralized project data within the Microsoft platform. This creates a strong foundation for future AI capabilities.
